WORK EXPERIENCE

Freelancing   August,2021-Present   Accra, Ghana

Building applications for small businesses
1. Helping small businesses build an online presence and market their products to the world.
2. Creating beatiful Ui to ocnvert users.
3. Maintaining and managing their web applications.
4. Helping clients with infrastructure and helping them understand the impact.

Junior Developer, UNIQUE DELIVERY EXPRESS GHANA LIMITED
August,2022- September, 2022

Accra, Ghana

I work here a junior developer on a contract
My roles were;
1. Assist in building the web app
2. Management of the web apps
3. Updating and redesigning the company's application.

4. Writing and maintaining clean code.
5. Create new features for the existing application
6. Handling imagery for the application

Solutions Architect, Edgeitsol

May,2021-October, 2021

Accra, Ghana

I worked here a solution architect at Edgeitsol company ltd.

My roles were;

1. Build web apps
2. Management of sites or web apps
3. Updating and redesigning web sites and web apps.

Here I learned a lot like team work, practical skills and better techniques to work efficiently.

Graphic Designer/UI&UX designer, Backyard Studios

September,2020-present Accra, Ghana.

I currently work with a graphic design brand called backyard studios. Here we use Adobe photoshop, illustrator and Figma to implement our designs.

Some of our work could be found on Instagram.

SIDE PROJECTS

Project's name: Secrets app. This project was used to practice all levels of security on the back-end and how to effectively protect the user's data. It was built using NodeJS(packages), Google oaunth, Mongo db, robo 3t passport.js, Express, Bootstrap and EJS.

NB:(It is an ongoing personal project)

https://github.com/HakzTV/secrets-app

Project's name: RESTful API. This was a very simple API used to get facts about me. This project's purpose was built using Mongo db, NodeJS, Express and Robo 3T and was tested using Postman. This project's purpose is to learn and understand the RESTful architecture and how to efficiently build one.

https://github.com/HakzTV/tee-api

Project's name: To-do-list app. This project was built using node.js, express and EJS and heroku for hosting. This is just to push my knowledge of node and also learn how to use a templating engine.

https://blooming-fortress-37609.herokuapp.com/

Project's name: **Telvin's Email sign up page**. This project was built using Javascript, node, express, git, heroku and the mail chimp API. This is a simple page that collects a user's data and stores it on mail chimps database and from their end i could use the emails for e-mail marketing or campaigns.
