2. Management of the web apps
3. Updating and redesigning the company's application.
4. Writing and maintaining clean code.
5. Create new features for the existing application
6. Handling imagery for the application

Solutions Architect, Edgeitsol   May,2021-October, 2021

Accra, Ghana

I worked here as a solution architect at Edgeitsol company ltd.

My roles were;

1. Build web apps
2. Management of sites or web apps
3. Updating and redesigning web sites and web apps.

Here I learned a lot like team work, practical skills and better techniques to work efficientl.

SIDE PROJECTS

Project's Name: Tee's App: This project is basically my personal web app where I have all my projects, tools I use, link to my youtube channel where I teach web development and more information about me. Some features this has is a blog to make written content about my journey in teaching web development,   beautiful UI , Light & Dark mode some new concepts and news about the space. This has CI/CD to make updates to the app easily and quickly. This was built using, Node Js, express js, Mongo Db, tailwindcss and, Cloudinary for content hosting and EJS.

Project's name: E-learning Platform. This project essence is to create a platform used for learning educational content for students in Ghana. The goal is to be able to push It beyond Ghana and make it for the whole of Africa. Some features include a dashboard with a user's progress, Blog to update user's on any new features or updates and, quiz   section and video section to watch the content   It was built using NodeJS(packages), Google oaunth, Mongo db, robo 3t passport.js, Express, Bootstrap, CSS and EJS, It has CI/CD .

NB:(It is   still a work in progress)
https://tizo-africa.up.railway.app/

Project's name: Secrets app. This project was used to practice all levels of security on the back-end and how to effectively protect the user's data. It was built using NodeJS(packages), Google oaunth, Mongo db, robo 3t passport.js, Express, Bootstrap and EJS.
NB:(It is an ongoing personal project)
https://github.com/HakzTV/secrets-app

Project's name: RESTful API. This was a very simple API used to get facts about me. This project's purpose was built using Mongo db, NodeJS, Express and Robo 3T and was tested using Postman. This project's purpose is to learn and understand the RESTful architecture and how to efficiently build one.
